

ADHD Appraisal

All children have problems paying attention and controlling their behavior, but for some children, these problems negatively affect some areas of their life, like their performance at school or interaction with friends. A child with ADHD may have problems in either one or both of these areas: paying attention and controlling either hyperactive or impulsive behavior. Use this appraisal to help you decide if your child needs further evaluation.

This appraisal is not intended to provide you with a diagnosis. A diagnosis for this condition may be made only after your child is evaluated by a behavioral health provider. Consider contacting a behavioral health provider if your answers to the appraisal indicate the possibility that your child has symptoms consistent with Attention Deficit Hyperactivity Disorder, or if you have questions or concerns related to ADHD.

Attention Problems	Yes	No
1. My child often makes careless mistakes on his schoolwork.	<input type="radio"/>	<input type="radio"/>
2. My child often has trouble paying attention to instructions and/or concentrating on daily activities.	<input type="radio"/>	<input type="radio"/>
3. My child often does not seem to listen.	<input type="radio"/>	<input type="radio"/>
4. My child often does not finish tasks, such as chores and homework.	<input type="radio"/>	<input type="radio"/>
5. My child often has difficulty organizing activities.	<input type="radio"/>	<input type="radio"/>
6. My child often avoids tasks that require focused and sustained attention, such as homework.	<input type="radio"/>	<input type="radio"/>
7. My child often loses things, such as school supplies.	<input type="radio"/>	<input type="radio"/>
8. My child is often distracted by noises and is forgetful.	<input type="radio"/>	<input type="radio"/>
Problems with Behavior (Hyperactivity and Impulsivity)	Yes	No
1. My child often has problems sitting still — seems to be constantly fidgeting and squirming.	<input type="radio"/>	<input type="radio"/>
2. My child often leaves their seat in school when they're not supposed to.	<input type="radio"/>	<input type="radio"/>
3. My child often runs around and climbs on things.	<input type="radio"/>	<input type="radio"/>
4. My child often has trouble playing quietly.	<input type="radio"/>	<input type="radio"/>
5. My child often seems to always be "on the go."	<input type="radio"/>	<input type="radio"/>

- | | | | |
|----|---|-----------------------|-----------------------|
| 6. | My child often talks too much for a given situation or blurts out answers when not called on. | <input type="radio"/> | <input type="radio"/> |
| 7. | My child often has difficulty waiting for their turn in games. | <input type="radio"/> | <input type="radio"/> |
| 8. | My child often interrupts others in conversations. | <input type="radio"/> | <input type="radio"/> |

Scoring

If you checked "yes" to four or more of the items in the appraisal, you may want to consider consulting with your child's pediatrician or behavioral health clinician about an ADHD assessment. In children with ADHD, these problems typically have been evident for at least 6 months prior to diagnosis, and some of them have occurred before the age of 7.

If you checked "yes" to less than four of the items in the appraisal, it would appear that you don't think you need to consider consulting with your child's pediatrician or behavioral health clinician about an ADHD assessment. If you begin to feel that your child is exhibiting symptoms of ADHD at a later time, take this appraisal again

Please note: This appraisal is not intended to provide you with a diagnosis. A diagnosis for this condition may be made only after your child has been evaluated by a behavioral health provider. Consider contacting a behavioral health provider if your answers to the appraisal indicate the possibility that your child has Attention Deficit Hyperactivity Disorder, or if you have questions or concerns related to this condition.
