Press release July 7, 2026:

*"Guam remains in Condition of Readiness (COR) 1. All military bases remain in Tropical Cyclone Condition of Readiness (TCCOR) 1. **Remain indoors and off the roads until COR 4 is announced.**"*

Final Bavi Update from NWS

After nearly a week of preparedness, planning and actions to take shelter from the developing super typhoon, and a morning of damage and destruction, Super Typhoon Bavi is now exiting the region to the west. Bavi is on a track that will take it toward the western Philippine Sea, perhaps toward Taiwan or the southwestern islands of Japan. As of Monday night Bavi was moving west at 13 miles per hour with maximum sustained winds of 165 mph. The wind field of Super Typhoon Bavi is expanding, with typhoon force winds extending outward from the center up to 70 miles, while tropical storm force winds extend outward from the center up to 320 miles. Bavi is expected to maintain its intensity for another day or two, before beginning a very gradual weakening trend.

The National Weather Service said the Weather Alert issued Monday night would be the last on Super Typhoon Bavi. Other ongoing hazards include a High Surf Warning and a Coastal Flood Warning due to the ongoing significant sea and surf hazards, and resulting in some coastal inundation and potentially deadly rip currents. Keep up to date with all the latest forecasts and information from NWS Guam at [weather.gov/gum](https://www.weather.gov/gum).

GWA Update

The Guam Waterworks Authority (GWA) reports that 67 of the 99 water wells that were operational before the storm are currently online and operating on generator power. An additional 28 wells remain offline, while the operational status of the remaining four wells is still being verified.

Contact Airlines Directly for Flight Status Updates

The Joint Information Center received notice from the Guam International Airport Authority (GIAA) that certain flights are resuming. All passengers are advised of the following:

- Sign up for mobile alerts and SMS messaging with their airlines to avoid unnecessary travel to the airport during unsafe weather conditions
- Regularly check inbound and outbound flight status on their respective airline's website and mobile applications

For flight status updates, please contact your airline or visit <https://www.guamairport.com/passenger/flights/flight-schedule>.

GBHWC Suicide & Crisis Lifeline remains operational 24/7. The community may call or text the hotline at 988 or chat online at 988lifeline.org.

Website News Post July 05, 2026:

“People on Guam and the Northern Mariana Islands are being warned today to remain in safe shelter until the all-clear is given as Super Typhoon Bavi nears with winds already gusting to 80 mph.

The National Weather Service (NWS) warns Bavi’s damage will be catastrophic — that with winds growing as strong as 180 mph when Bavi crosses the islands Monday, many homes and other structures will be destroyed, the power could be out for months and drinking water will be in short supply. In addition to wind damage, the islands could see flooding and landslides from almost two feet of rain and storm surge as high as 15”.

Tinian, Rota and Saipan are part of the Commonwealth of the Northern Mariana Islands (CNMI). CNMI and Guam are U.S. territories whose residents are U.S. citizens. This is the second time since April that these islands have been the target of a super typhoon. As Bavi approaches, some people are still living in temporary shelters or with makeshift roofs, trying to come back from the damage Super Typhoon Sinlaku left behind in April.

RED CROSS RESPONSE *The American Red Cross has prepositioned people and supplies on the islands, disaster volunteers from across the country traveling to the islands to support those in the path of this storm. They join local volunteers from the Red Cross Guam and CNMI Chapters, all working with local officials and partners to ensure people get the help they need.*

Shelters are open across the region and disaster teams are ready to support shelters, provide meals and other disaster recovery supplies as soon as possible after the storm moves away from the islands.

On the islands, shelters open in partnership with island Education Departments, then are taken over by local officials. The Red Cross is finalizing plans to support sheltering after the storm’s impact.

Previously, hundreds of Red Cross volunteers and partners spent more than 80 days helping people after Super Typhoon Sinlaku hit the same islands in April.

FIND A SHELTER You can find open Red Cross shelters on [redcross.org](https://www.redcross.org), the free [Red Cross Emergency app](#) or by calling the local Red Cross chapter at 671-472-6217 to get connected to our call center at 1-800-RED CROSS (800-733-2767). You can also check with local officials and monitor local news for information on where to find emergency shelter.

If possible, people who plan to stay in a Red Cross shelter should bring prescription medications, extra clothing, pillows, blankets, hygiene supplies, other comfort items and important documents. Don't forget to bring any special items for children, such as diapers, formula and toys, or for family members who have unique needs. Red Cross shelters are open to everyone in need and all disaster assistance is free. We don't require people to show any kind of identification to enter a shelter — just their name and where they were living before the disaster.

YOU CAN HELP people affected by disasters like floods, storms and countless other crises by making a donation to Red Cross Disaster Relief.

Donate by visiting [redcross.org](https://www.redcross.org), calling 1- 800-RED CROSS (800-733-2767) or texting the word REDCROSS to 90999. Your gift enables the Red Cross to prepare for, respond to and help people recover from disasters big and small, whenever and wherever they occur across the country.

You can also help by becoming a volunteer. Get involved by visiting [redcross.org/volunteer](https://www.redcross.org/volunteer) or contact your local chapter. Guam Chapter: (671) 472-6217; CNMI Chapter: (670) 234-3459

SAFETY STEPS The Red Cross issues the following steps people should take to help them remain safe:

1. **Stay calm and keep informed.** Comply with any evacuation orders. If you live in a metal roof or container home, or you live in a surge zone or any location prone to flooding, evacuate to a designated shelter or ride out the storm in the sturdy home of family or friends outside of evacuation zones.
2. **Be prepared to evacuate quickly and leave the area if local officials tell you to do so.** Have your disaster kit ready. Plan your evacuation route and alternates in case main roads are impassable. Where will you go and how will you get there? Will you go to a hotel, a friend or relative's home, or an emergency shelter? Don't forget your pets. If you must evacuate, make arrangements for your animals. Keep a list of pet-friendly hotels and animal shelters that are along your evacuation routes.

3. **Stay indoors. Avoid beaches, riverbanks and floodwaters.** Stay alert for extended rainfall and subsequent flooding. Don't walk, swim or drive through floodwaters. Remember: Turn around, don't drown.
4. **Don't walk, swim or drive through floodwaters.** Turn around, don't drown! Stay off the roads. If you must drive and you encounter a flooded roadway, turn around and go another way. Follow evacuation routes and don't try to take shortcuts because they may be blocked. If you're caught on a flooded road and waters are rising around you, quickly get out of the car, move to higher ground and stay there.
5. **During a power outage, unplug appliances and electronics to avoid damage from power surges. Leave one light on, so you'll know when power is restored.** Use flashlights or battery-operated lanterns — not candles. Don't drive unless necessary. Traffic lights will be out, and roads could be congested. Decide if you need to leave if your home is too hot or cold, or if you have medical devices that need power.
6. **If you're using a generator, keep it dry and don't use it in wet conditions.** Carbon monoxide kills. If you start to feel sick, dizzy or weak, get to fresh air right away. Never use a generator, grill, camp stove or other gasoline, propane, natural gas or charcoal burning device inside a home, garage, basement or other partially enclosed area. Keep this type of equipment outside and away from doors, windows and vents. Plug appliances directly into the generator. Never plug a generator into a wall outlet. Operate the generator on a dry surface and don't touch it with wet hands.

Annual Disaster Giving Program (ADGP) Through the generosity of our American Red Cross Annual Disaster Giving Program (ADGP) and Disaster Responder members, the American Red Cross is prepared before disaster strikes. ADGP and Disaster Responder members help secure a reliable funding base for disaster relief services that enables the Red Cross to respond immediately, meeting the needs of individuals and families affected by disaster.”
